

Informed consent

This informed consent form is for participants invited to take part in a study on spoken interaction at the Department of Speech, Music and Hearing, at KTH Royal Institute of Technology.

In the interaction, the participants take turns selecting a piece on a shared game board as instructed by the other participant, who can see which piece is the correct one to move. The interaction is recorded. The recorded data consists of the audio from both participants during the interaction and the logged events from the graphical user interface.

I hereby consent that the data I provide may be used for scientific purposes only, such as data analysis, and can be shown at scientific conferences. I understand that my words may be quoted in publications, reports, web pages, and other research outputs. Any personal details, such as name, phone number and address will not be revealed to people outside the project. Other researchers will have access to this data only if they agree to follow the constraints stated in this form.
